young people improving Research

Creating a Glossary

For young people,
of **research terms**
that are:

- essential to understanding research
- hard to understand

What we will create

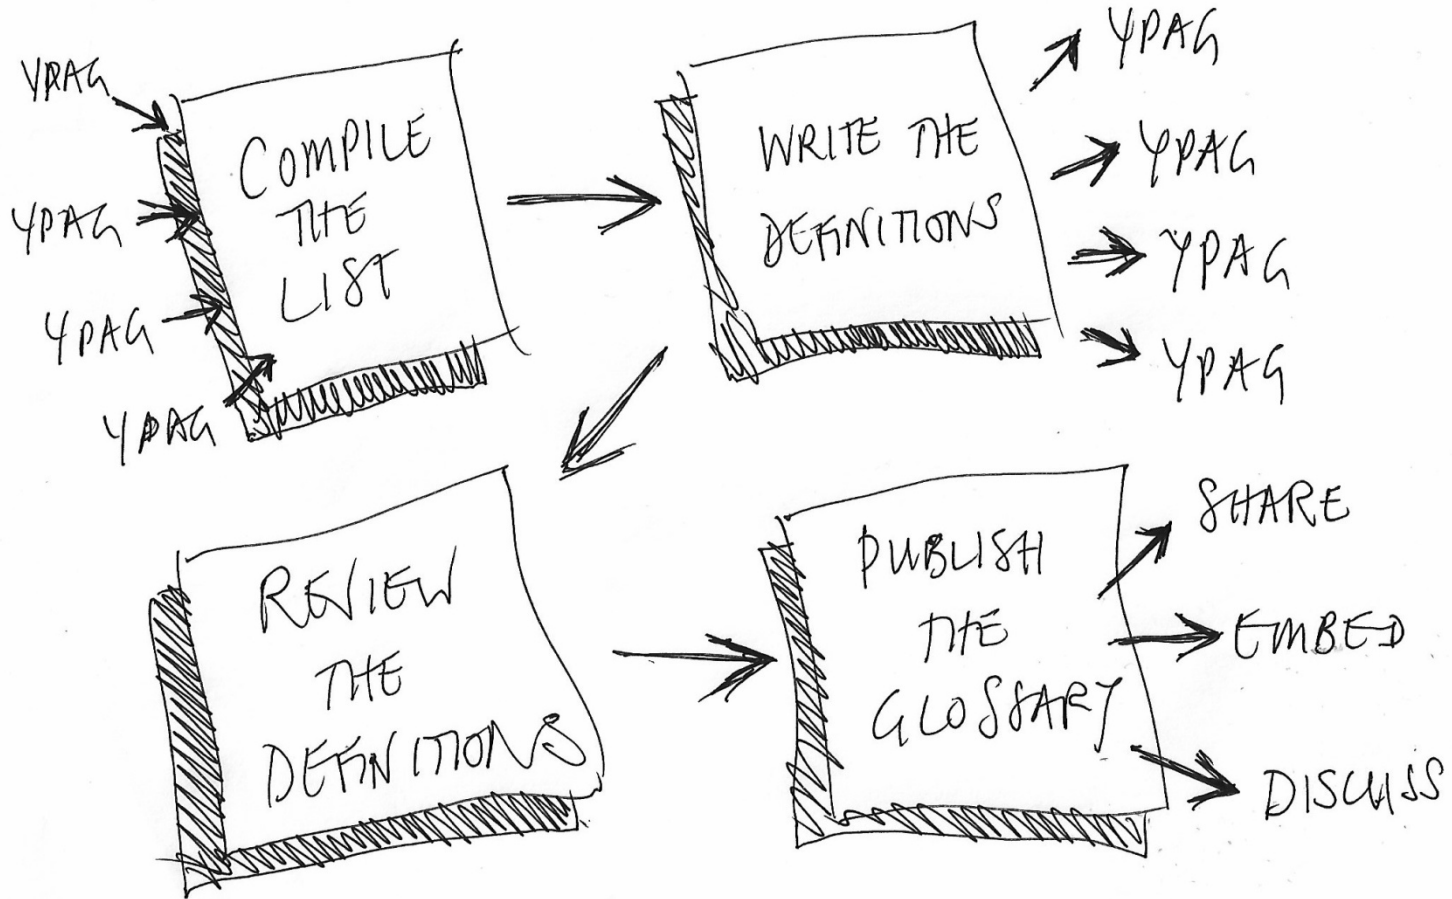

- An online glossary

<http://ypags.getitglossary.org>

- That can be embedded in other websites

<http://catalogofbias.org/biases/recall-bias/>

Project plan

Project plan

1. Come up with a list of terms
2. Share them out amongst the YPAGs
3. Write definitions intended for:
 1. up to 14 years
 2. 15-18 years
4. Add any other learning resources we have
5. Review the definitions written by other YPAGs

Our job today

- 1. Come up with a list of terms**
2. Share them out amongst the YPAGs
3. Write definitions intended for:
 1. up to 14 years
 2. 15-18 years
4. Add any other learning resources we have
5. Review the definitions written by other YPAGs

Come up with a list of terms

- 1. Thinking about health research, what are 10 difficult jargon terms that you have come across?**
 - Is there already a definition in GETIT?
 - Is it any good?
- 2. Input your list into the GenR website form**
Link to be confirmed

Thinking about the glossary

- Should we have different glossary definitions for different age groups?
 - e.g. under 12 years, 13-15, 16+
- If so, how many levels do we need?
